

Technical Requirements to Access Parent's Evening Software

The online software we are using for the parents evening is very simple to use and doesn't require its own software or app to be installed but does have a few basic requirements. Put simply, in order to make video calls for this digital parents evening you will need to have:

1. A device with a microphone and speaker to allow you to hear and speak to us
2. A reliable internet connection. 4G connection will work but may be slow and will use a lot of data. We recommend a 'Wifi' or 'Wired' connection for the best experience.
3. Your device must have a compatible web browser on your device:

Device	Required Software
iPhone / iPad	Safari (installed by default on your device)
Android	Chrome or FireFox Internet Browsers
Windows (PC)	Chrome, Firefox, Microsoft Edge, Chromium
Mac	Safari, Chrome or Firefox
Linux	Chrome or Firefox

Your smartphone will work well with these appointments (remember to charge the battery or 'plug in' before hand). If you are using a laptop or computer, please ensure that the webcam, microphone and sound are enabled and working. You can use headphones for audio if required.
